

Tags I am using to process commands:

Format of command i am processing:

username = "vikram" + path="root/movies/list.txt"

For Download :

#Download# + username = "vikram" + path="root/movies/list.txt" + "#EndOfCommand#"

For now I have considered returning data with a post request method like I had mentioned.

For folder access:

#Contents# + username = "vikram" + path="root/code/" + "#EndOfCommand#"

Return with contents of the folder "code" as below

#Folder# + "path=root/code/#CIS505/#CIS560/#grades.txt" + "#End#"

For Newfolder :

#AddFolder# + username = "vikram" + path="root/movies/hindi" + foldername = "new/" + "#EndOfCommand#"

Reply with:

#AddComplete#

For move file:

#Movefile# + username = "vikram" + oldpath="root/movies/" + newpath="root/movies/hindi/" + "filename=list.txt" + "#EndOfCommand#"

Reply with :

#MoveComplete#

For delete folder :

#DeleteFolder# + username = "vikram" + path="root/movies/" + "foldername=hindi/" + "#EndOfCommand#"

Reply with :

#DeleteComplete#

For delete file :

```
#DeleteFile# + username = "vikram" + path="root/movies/hindi/" + "filename=list.txt"
+"#EndOfCommand#"
```

Reply with :

```
#DeleteFileComplete#
```
